B V N S HEMANTH

Founding Engineer — AI

bharatulahemanth@gmail.com · +91 99126 39497 · linkedin.com/in/bharatula-hemanth-6a3782236 · github.com/hementhu · hementhu.github.io · India · remote, open to relocation

Founding engineer who took an LLM decision-intelligence product from an empty repo to production in seven months: wrote 80–90% of the calculation and inference core, the runtime validators that check every generated claim against source data, and the mutation-tested evaluation proving those checks work. Owns roadmap, scoping and client meetings alongside the code. IIT Madras. Co-inventor on a filed UK patent. 1st place, WISER 2026 BQP challenge.

EXPERIENCE

infigro.ai · Founding Engineer (first hire) — AI & Data — Feb 2026 – Present

Decision-intelligence platform for growth leaders at OTT and e-commerce companies: analyses subscriber and revenue data end to end, then generates insights and prescribed actions with LLMs. Team of 5.

- Built **80–90% of the core calculation and inference layer** the rest of the team builds on: ingestion, sanitisation, EDA, decomposition and mix-shift analysis, chart and report rendering across **70+ analysis types**.
- Shipped **v1 to production in Sep 2026**, seven months from an empty repo. In daily use at a national OTT platform (paid contract from Oct 2026); two further OTT platforms committed, contracts in signing.
- Designed **runtime grounding validators** that check every number, filter and claim in LLM-generated output against the source data before delivery. Fail-closed: a failing output is retried or rejected, never shown.
- Proved the validators with **mutation testing: 52 of 52 seeded defects caught, 0 false positives**; golden regression suites gate every release.
- Cut report generation from **40 to 12 minutes** on **10M+ row** client datasets by re-architecting the data layer from CSV/pandas to Parquet.
- Beyond code: wrote the **product roadmap**, scoped features with the founders, run **client meetings** with the live customer's growth team, and mentor the junior engineer.
- Designed the **prompt architecture**: typed output contracts with deterministic repair paths, so malformed LLM outputs self-correct at runtime instead of failing client runs.

Jaguar Land Rover · Graduate Engineer, R&D — Jul 2024 – Feb 2026 (notice period to Apr 2026)

- Built an **LLM pipeline (Flan-T5-XXL)** that deduplicated 3,000 interview questions, replacing ~4.5M pairwise manual comparisons. Random-sample audits found no errors; ran weekly through hiring cycles with zero production failures. **100+ hours saved per run.**
- Replaced FEM/CFD simulations with **physics-informed neural network surrogates**: **18× faster inference** (5 s vs 90 s) at ~1e-5 error. 4th of 40 in the internal R&D showcase; awarded AWS credits and conference sponsorship.
- Modernised **100+ legacy C files** and replaced VBA tooling with a Python DCM parser (70% less processing time); integrated into the Roll Stability Control pipeline for 2027 vehicles.

AWARDS & PATENTS

- **1st place (solo), WISER Summer Program 2026 × BQP challenge** — quantum-assisted PINNs for CFD; invited to interview for the research fellowship.
- **Co-inventor, UK patent filed 2024** — Simulated Driving Experience using Integrated Vehicle Systems. A second (Steer-for-Traction Algorithm) is in filing.
- **Top 5%, Shell AI Hackathon** — fuel blend property prediction; multi-stage ensembles with residual meta-modelling.

OPEN SOURCE & WRITING

- **codemap** — open-source visual map of any Python codebase from pure AST analysis, no LLM; every claim links to its exact source lines. github.com/hementhu/codemap
- **Writing on LLM agent reliability** (LinkedIn) — *Unapologetic Sorry*, on why accountability moves to the operator; and *The model explains the decision, it doesn't make it*, on keeping decisions in the deterministic layer.

SKILLS

Build	Python, SQL, PyTorch, FastAPI, AWS, Parquet/pandas, ECharts/Plotly, Git, C
LLM systems	agent orchestration, typed output contracts, runtime validation, mutation-tested evaluation, prompt architecture
Analysis	decomposition and mix-shift analysis, causal-claim guards, EDA at 10M+ rows, statistics and optimisation

EDUCATION

B.Tech, Mechanical Engineering, Minor in AI/ML — Indian Institute of Technology Madras, 2024 · CGPA 8.25/10. Coursework: Pattern Recognition & ML, Speech Technology, Probability & Stochastic Processes, ML for Engineering.
